Environmental & Sustainability Policy

VBG Truck Equipment, which is part of the truck and trailer industry, will protect the external as well as the internal environment.

Our Environmental & Sustainability targets are based on applicable regulations, value chain mapping and stake holder interviews, with the main focus to reduce GHG emissions and improve safety. Other areas concerned are reducing waste, increase recycling, improve water quality, the use of chemicals and use fossil free electricity together with improved energy efficiency.

Our activities in new as well as existing processes/products will lead to a reduction of the environmental impact. This will be reached through utilization of resources in a structured way, through prevention of contaminations and continuous improvements with the best available technology from an economic point of view and measured in sustainability reporting.

The activities will be carried out so as:

- applicable regulations will be properly fulfilled, material and energy are utilized to reduce the environmental impact and noise levels are minimized.
- all employees shall have the knowledge of their and the company's environmental impact.
- environmental aspects, with regards to the product's life cycle, are taken into consideration.
- environmental aspects are one of the criteria when selecting and evaluating suppliers.
- risk assessment, activity and contingency plans will be in consultation with concerned authorities continuously updated and enforced to reduce/avoid effects of potential environmental incidents.
